

ABSTRACT

5 An abnormality in text data recorded on a CD
conforming CD-TEXT format is detected so that a proper
display can be created. In the case of text data
recorded in a double-byte character code (step 1002), if
the text data is XX 00 (step 1006) or 00 XX (step 1008),
it is determined that abnormality has been detected.
Alternatively, a character position is determined by
10 counting recorded characters, and the character position
is compared with recorded character position information
to detect the presence or absence of abnormality.
